KENNETH MARC B. BALASTA

AI AUTOMATION DEVELOPER | WORKFLOW AUTOMATION | TESTING & TROUBLESHOOTING

kmarcbal@gmail.com | github.com/Kenmbal | Albay, Philippines | Open to relocation, hybrid, or remote

PROFESSIONAL SUMMARY

Computer Science student with hands-on experience building workflow automations, AI-assisted content workflows, chatbots, and Python/Selenium scripts. Developed n8n workflows connecting Google Sheets, Gemini-powered AI agents, JavaScript formatting, and spreadsheet outputs; also automated IT asset processes during an internship. Brings a testing and troubleshooting mindset, practical CRM and ticketing-system exposure, and a strong interest in building reliable AI agents and business automations.

EXPERIENCE

IT Support Intern — PANDR

Jun 2025 – Jul 2025 | Philippines | On-site

- Developed Python and Selenium automation scripts for IT asset check-in/check-out workflows and packaged tools as desktop applications using PyInstaller.
- Automated inventory tracking in AssetTiger to reduce manual data entry and improve record accuracy.
- Built an internal employee-support chatbot in Botpress to assist with common queries and workflow guidance.
- Set up and configured osTicket as the team's IT support ticketing system.
- Supported OPNsense firewall configuration, including interface setup and IP assignments; troubleshot basic network and connectivity issues.
- Maintained IT equipment through laptop reformatting, hardware setup, and general infrastructure support.

PERSONAL PROJECTS

Vet Clinic Vaccine Recall Automation — n8n

- Built an automated vaccine reminder system for a veterinary clinic using n8n. Each morning, it reads pet records from Google Sheets, validates each row, calculates each pet’s next vaccine due date, and emails owners at four milestones: 30 days before, 7 days before, on the due date, and 7 days overdue.
- Logs invalid records instead of silently dropping them, records every email send in a run log, and triggers a Slack alert when failures occur.
- Built as a demo using fake data, with a test mode that routes all emails to one test inbox.

Lead-to-Client Automation System — GoHighLevel (GHL)

- Built an end-to-end workflow connecting a lead capture form, appointment-booking calendar, instant SMS notifications, and CRM synchronization.
- Added post-meeting routing to send contacts toward onboarding or nurture, keeping opportunities tracked in the CRM pipeline.

TECHNICAL SKILLS

AI & Workflow Automation: n8n, Gemini-powered AI Agent workflows, Botpress, GoHighLevel (GHL), CRM workflow automation

Programming & Test Automation: Python, Selenium, JavaScript (workflow formatting), PyInstaller

Workflow & Data Tools: Google Sheets, CSV data handling, AssetTiger, osTicket

IT Systems & Troubleshooting: OPNsense firewall configuration, network troubleshooting, hardware setup and reformatting, IT asset management, IT audits

EDUCATION

B.S. Computer Science — Bicol University Polangui Campus, Polangui, Albay | 2022 – Present
